

Internship Portfolio Manager

Demo Report

Name	Oumou Diallo
Student Number	230303928
Course	Software Engineering
GitHub	github.com/dilika2006/Internship_portfolio_manager

Project Overview

The Internship Portfolio Manager is a multi-user web application that allows students to manage and track their professional development. Each user can securely register, login, and manage their own private portfolio containing internships, skills, projects, and certificates. Users can only access their own data — no user can view or modify another user's information.

Key Features

Feature	Description
Authentication	Register, login and logout with session-based security
Multi-User	Each user has private data, isolated from other users
Internships	Full CRUD — add, view, edit and delete internships
Skills	Track skills with proficiency levels (Beginner / Intermediate / Advanced)
Projects	Record projects with description, dates and links
Certificates	Store certificates with issuer, date and links
Validation	Username min 3 chars, password min 6 chars

User Stories

US-01 — User Registration

As a new user, I want to register an account so I can access my portfolio.

Acceptance Criteria:

- User can register with a username and password
- Username must be at least 3 characters
- Password must be at least 6 characters
- Cannot register with an existing username

US-02 — User Login and Logout

As a registered user, I want to login and logout so my data stays secure.

Acceptance Criteria:

- User can login with correct credentials
- Wrong credentials shows an error message
- After logout, user cannot access the dashboard
- Already logged-in users are redirected to dashboard

US-03 — Manage Internships

As a user, I want to add, edit and delete my internships so I can track my experience.

Acceptance Criteria:

- User can add an internship with company, role, dates, skills and notes
- User can edit an existing internship
- User can delete an internship with a confirmation prompt
- User can only see their own internships

US-04 — Manage Skills

As a user, I want to track my skills so I can show my technical growth.

Acceptance Criteria:

- User can add a skill with a name and proficiency level
- Level options are: Beginner, Intermediate, Advanced
- User can edit and delete skills
- User can only see their own skills

US-05 — Manage Projects and Certificates

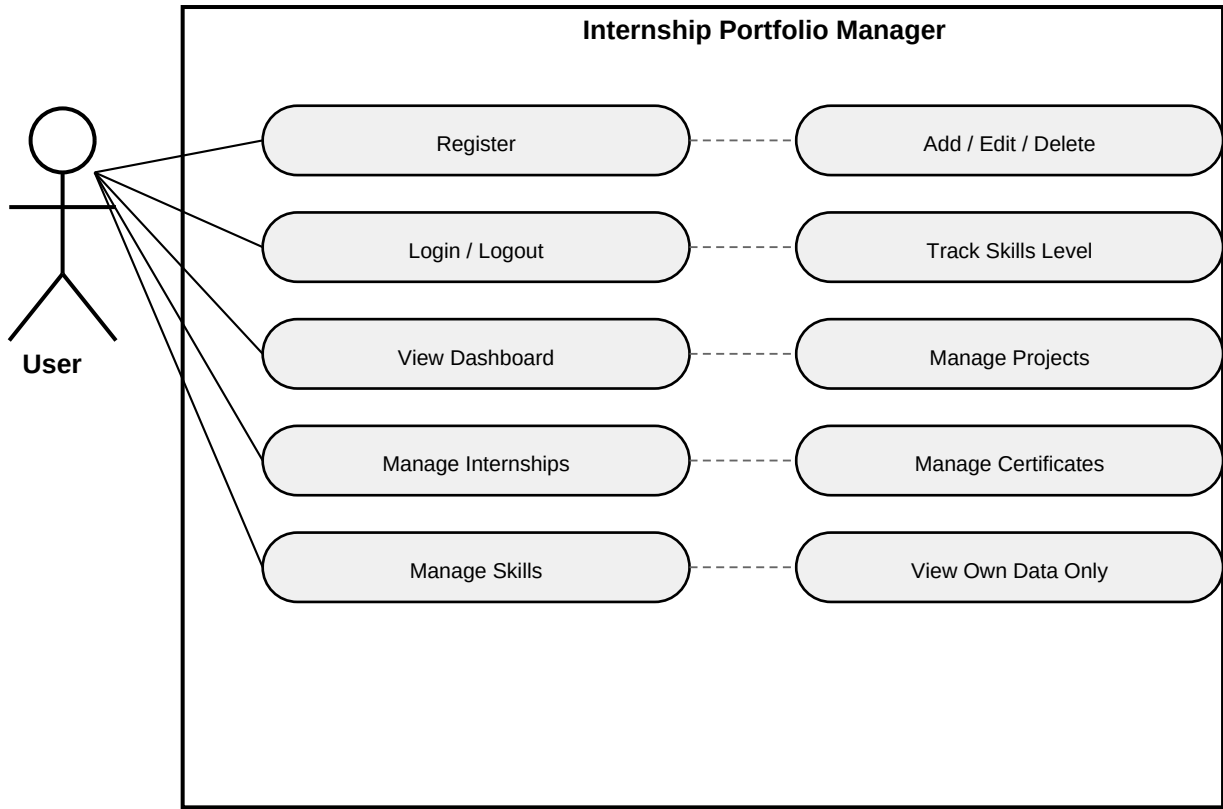

As a user, I want to record my projects and certificates so I have a complete portfolio.

Acceptance Criteria:

- User can add projects with title, description, dates and a link
- User can add certificates with title, issuer, date and a link
- User can edit and delete both projects and certificates
- User can only see their own data

Use Case Diagram

The diagram below shows all interactions between the User and the system.

Testing

Unit tests were written for the core business logic functions in the application. These functions are independent of Flask routes, making them easy to test in isolation.

Functions Tested

Function	Test Case	Expected Result
is_valid_username()	Username 'ahmad' (5 chars)	True
is_valid_username()	Username 'ab' (2 chars)	False
is_valid_username()	Username 'abc' (exactly 3)	True
is_valid_password()	Password 'mypassword'	True
is_valid_password()	Password '123' (3 chars)	False
is_valid_password()	Password '123456' (exactly 6)	True
internship_belongs_to_user()	Same user ID (1, 1)	True
internship_belongs_to_user()	Different user IDs (1, 2)	False

All 8 tests pass successfully.

Multi-User Behavior

The application was tested with multiple user accounts. Each user can only view and manage their own data. This is enforced by filtering all database queries using the logged-in user's session ID, and by checking ownership before any edit or delete operation.
